

Feature

Benefit

DIGITAL CABLE AND SATELLITE DISTRIBUTION

Bring hundreds of channels into your home from a satellite or cable provider-and deliver HDTV throughout your home.

VIDEO MONITORING

Keep an eye on the most important assets in your home with an integrated security camera system which lets you watch up to 16 cameras on dedicated channels from any TV in your home.

MULTI-ROOM AUDIO

Equip your home with a high-performance, built in multi-room audio system that will deliver music both inside and outside when used with your existing home entertainment components.

INTERCOM

Feel secure knowing who is at your door with an intercom system that lets you talk to visitors by phone and see them on your TV (when integrated with a camera monitoring system) You can also communicate with your family members in different rooms.

NETWORKING

Link all the computers in your home with one high-speed network, sharing files, printers, scanners and other hardware for everything from home office to video games.

INTERNET SHARING

You can simultaneously access the World Wide Web with multiple computers using one high-speed broadband account. You'll enjoy super fast downloads, web surfing and protection from hackers with an ultra-safe, built in hardware-based firewall.

DIGITAL MULTIMEDIA DISTRIBUTION AND ENTERTAINMENT

Enjoy a high performance, multimedia server that ties together your home's computers and entertainment electronics, such as TVs and audio systems.

Structured Media Wiring Solutions

The Foundation for your Digital Home

Leviton Certified Installers

Pre-wiring a home for technology with Leviton structured cabling is no longer a luxury; it is a necessity. Its is the very catalyst that sets in motion all of the marvelous wonders that state-of-the-art living can provide to you and your family.

In the last century, automobile truly revolutionized where and how Americans lived. It took them out of the house and onto the open road. Today, the World Wide Web and other technologies have brought the world to us without having to leave our homes. A flood of technologies that stream data and information have dramatically uprooted established patterns of everyday behavior—whether we are working or learning, playing or just spending free time. They all have to do with connectivity.

Structured Cabling

What is it?

The Leviton Structured Cabling system is the foundation on which your home communications and entertainment network will be built. It is designed to organize and distribute connectivity technologies throughout your new home. Structured cabling connects each room on a “direct run” of high capacity Category 5e/6 and coaxial cable to a central enclosure called a Structured Media Center. This Centrally located system often manages and distributes voice, data, audio and video signals throughout your home.

What Does it Do?

Starting with the basic building blocks of Telephone and Broadcast/Cable TV Distribution, you can choose structured cabling enhancements that can tap into various— and sometimes extremely advanced and complex— Connectivity capabilities. These enhancements are modules that simply snap into the Structured Media Center and included: Satellite Distribution, Video Monitoring (Security cameras/CCTV), Multi-Room Audio, Multi-Room Video, Intercom System, Networking, Internet Sharing, and Digital Multimedia Distribution and Entertainment.

What does it do for me?

Because it is modular in design, the structured cabling system can support existing and emerging technologies that can be adapted to your changing needs. The infrastructure to support this system is less costly to install before the walls are up and may even help increase your home's value. Best of all, it is more affordable at this stage. Planning for tomorrow's entertainment, communications and networking technologies should be an essential item on your “new home checklist” today.
